Description

Little A gets to know a new friend, Little B, recently. One day, they realize that they are family 500 years ago. Now, Little A wants to know whether Little B is his elder, younger or brother.

Input

There are multiple test cases.

For each test case, the first line has a single integer, n ($n \leq 1000$). The next n lines have two integers a and b ($1 \leq a, b \leq 2000$) each, indicating b is the father of a . One person has exactly one father, of course. Little A is numbered 1 and Little B is numbered 2.

Proceed to the end of file.

Output

For each test case, if Little B is Little A's younger, print "You are my younger". Otherwise, if Little B is Little A's elder, print "You are my elder". Otherwise, print "You are my brother". The output for each test case occupied exactly one line.
