Description

It is just a mining spanning tree (最小生成树) problem, what makes you a little difficult is that you are in a 3D space.

Input

The first line of the input contains the number of test cases in the file. And the first line of each case contains one integer numbers n ($0 < n < 30$) specifying the number of the point . The next n lines, each line contains **Three Integer Numbers** x_i , y_i and z_i , indicating the position of point i .

Output

For each test case, output a line with the answer, which should accurately rounded to two decimals .

Samples

input	Copy
<pre>2 2 1 1 0 2 2 0 3 1 2 3 0 0 0 1 1 1</pre>	
output	Copy
<pre>1.41 3.97</pre>
