Description

Problem D: Power Strings

Given two strings a and b we define $a*b$ to be their concatenation. For example, if $a = "abc"$ and $b = "def"$ then $a*b = "abcdef"$. If we think of concatenation as multiplication, exponentiation by a non-negative integer is defined in the normal way: $a^0 = ""$ (the empty string) and $a^{(n+1)} = a*(a^n)$.

Each test case is a line of input representing s , a string of printable characters. For each s you should print the largest n such that $s = a^n$ for some string a . The length of s will be at least 1 and will not exceed 1 million characters. A line containing a period follows the last test case.

Samples

input

Copy

```
abcd
aaaa
ababab
.
```

output

Copy

```
1
4
3
```
