Description

An evil professor has just assigned you the following problem.

A sequence is defined by the following recurrence:

□

Determine

 $x_{1000000}$

.

Input

Input consists of a number of lines, each containing one integer, a value of i , no less than zero and no greater than one million. Input is followed by a single line containing the integer -1 . This last line is not a value of i and should not be processed.

Output

For each value of i in the input (but not the final -1), output the corresponding value of x_i modulo 1000000.

Samples

input	Copy
0 -1
